Precipitation probability					
50%	30%	40%	30%	20%	20%

Forecast for Wednesday 19 Jan 2022

Weather: Overnight rain and snow will have moved south and there will be some brightness. Feeling very cold with the winds veering northwesterly and remaining gale force. Wintry showers are expected at times throughout the day, with freezing level falling to 400m by the afternoon, but some bright and dry weather too. Showers beginning to die out during the evening.

Chance of cloud free mountain/hill tops above 800m: 40% in the early morning associated with rain moving through, then increasing to 70% with low cloud shrouding the tops in showers during the afternoon.

Visibility: As rain and sleet clears away, visibility may be quite poor initially in the early morning but it will become very good after the frontal rain and before any showers develop. Cloud bases will be broken around 700m at dawn but soon lift and clear in the morning. Around showers cloud will fall to around 700m temporarily, showers should move through quite quickly but visibility in wintry showers may reduce to less than 2 or 3km temporarily, with strong winds making conditions quite unpleasant and a little blizzard like at times.
